

# The Parfait line from Gernetic Int.

What woman, young or less young, does not dream of keeping her youthful skin or recapturing it? After years of research, GERNÉTIC Int.—specialists and consistent innovators in the area of skin care for over 30 years—have developed a line of three Timeless products for effective action against aging of the skin, notably that of the face but also that of the hands, if necessary.

These products prevent aging and rejuvenate already aged skin, by stimulating cell proliferation, quenching free radicals, and nourishing cells deep down in the lower layers of the skin.

Each of the three products can be used either on its own or in combination (depending on the specific case), to mitigate adverse factors such as mass-produced food, the stresses and pollution of modern city life.

The fruit of the latest advances in biotechnology research, Gernetic Int. Parfait products are impressively effective.

**Staying young, slower aging, rejuvenation  
No longer just a dream, a dream come true**

**CONCENTRATED REPAIRER  
TIME-DEFYING CREAM  
YOUTH CREAM**

These three products are going to surpass all your expectations and hopes.

The skin is not merely a protective envelope but rather a complex, vital organ with numerous functions.

Above and beyond any esthetic considerations (radiance, smoothness, complexion, etc.), recent progress in the field of dermatology and cosmetics research has demonstrated how important the skin really is.

For example, extracellular enzymes such as the sphingomyelinases play a key role in the formation of ceramide bilayers which insure that skin cells adhere to one another as they should. Similarly, cutaneous phospholipase enzymes regulate the proliferation of keratinocyte cells. Ceramidases, phosphatases, catalase and superoxide dismutase are all enzymes involved in defense against free radicals.

Therefore, it is vital to maintain the normal functioning of the epidermal stratum corneum. Enzymes are the biochemical cogs of cells and are therefore essential components in the mechanism of life.

**“Wrinkles are due to inadequate collagen synthesis in the skin.”  
Professor Robert Garonne, Department of Cell Biology, University of Lyon.**

# CONCENTRATED REPAIRER

Always on the lookout for useful advances in biotechnology research, over the years GERNÉTIC Int. has consistently tested new, natural active substances to develop better products for you.

GERNÉTIC Int. CONCENTRATED REPAIRER  
The main active substances in this product are:

VITAMIN E. Quenches free radicals, natural moisturizing activity, anti-inflammatory.  
The D.L-alpha-tocopherol acetate is sequestered inside multilamellar microsomes with a diameter of about one micron. This vehicle makes for slow diffusion through the body.

BIRCH SAP: long considered as an elixir conferring a long and healthy life, birch sap has been in use since the Ninth Century.  
Contains a comprehensive range of minerals, trace elements (including potassium, calcium, magnesium, silicon, zinc, manganese, selenium and cobalt) and vitamins (C, B1, B2, B3 and B6).  
Ideal for firmness, elasticity, tone and moisturization.

A REPARATIVE ACTIVE SUBSTANCE produced by the methods of biotechnology, in which the virtues of two different plants (one from Africa and the other from Latin America) act synergistically:  
- Quillaja Saponaria Molina: moisturizing and surface action  
- Kigelia Africana: contains peptides which stimulate cells and enhance skin firmness and tone.

A LIPID CONCENTRATE which is rich in plant-derived estrogens, especially beta-sisterol: stimulates intercellular adhesion and strengthens the cutaneous barrier.

A special PEPTIDE CONCENTRATE, rich in glutamic acid.

CLINICAL  
TEST

-68%  
on deep  
wrinkles

**GERNÉTIC Concentrated Repairer is effective at preventing, slowing down and reversing the manifestations of aging.**

Presented in an elegant, modern-looking pump-dispenser (25 ml).

Apply a small amount in the morning over the entire face, focusing specially on the deepest wrinkles. Use a gentle circular motion until all the product is absorbed. The hands too may be treated, if necessary.

# YOUTH CREAM

Youth is not just good looks; it is also a deep-down, positive outlook.  
When both beauty and optimism are combined, happiness is sure to be the result.  
GERNÉTIC has developed its Youth Cream on the basis of a physiological power so great that the skin of your face (and possibly hands) will profit to the maximum.  
Revitalization, smoothness, softness and good overall condition that will be the envy of everyone you meet.

The main natural active substances in Youth Cream are:

An ACTIVE SUBSTANCE based on magnesium ascorbyl phosphate which has potent anti-aging activity, quenches free radicals, stimulates dynamism and lightens the skin.

A special ACTIVE SUBSTANCE extracted from “extremophils”, extraordinary organisms which live at a great depth in the sea (2000 meters down) and amaze scientists.  
One of the enzymes found in these organisms (the so-called “extremozymes”) is a potent detoxifier of hydrogen peroxide.  
The natural habitat of the organism that produces this enzyme is at a temperature of 70 °C so its activity is amplified by up to 180 % in skin that is under stress from UVA radiation (e.g. sunlight).

An ACTIVE SUBSTANCE isolated from samphire, a plant found deep in the ocean which is rich in unsaturated fatty acids and phytostimulins: active against wrinkles, stimulates cell proliferation and reduces the thickness of the epidermal stratum corneum.

A marine DNA-based ACTIVE SUBSTANCE which is active against aging.

A LIPOPEPTIDE based on a combination of tyrosyl and arginine with neurosensory effects. Modulates the perception of hot and cold, pins and needles, and roughness. A unique, active substance for enhanced softness and comfort.

A PLANT-DERIVED GLYCOPROTEIN (molecular weight = 20,000 Daltons) with physiological growth factor activity.

An ACTIVE SUBSTANCE produced using the methods of biotechnology which helps consolidate the cutaneous immune defense system and increases the density of Langerhans cells.  
An extremely powerful active substance in the fight against the aging process.

**Youth Cream is a powerful cocktail of active nutrients with revitalizing and regenerative properties to combat aging at the cellular level.**

Presented in an elegant glass container (50 ml)

Apply a small amount in the morning over the entire face using a gentle, circular movement. The hands too may be treated, if necessary. Moreover, with its UVA-blocking activity, it is an excellent foundation for daytime use.

# TIME-DEFYING CREAM

The sleeping hours are an important time for regenerating energy and dynamism.  
During the night, time does not stop but beneficial waves repair damage, slow down the aging process, regenerate the nervous system and promote psychological well-being.

Now, GERNÉTIC Int. has developed a Time-Defying Cream which helps to relax skin cells throughout the night to promote gentle but deep regeneration.  
An easy-to-use but highly effective product to preserve youthfulness, delay aging and take back a few years.

The main natural active substances in TIME-DEFYING CREAM are:

A BIOFILTER complex produced from phosphocreatine precursors using the methods of biotechnology.  
An active substance which counters skin fatigue and confers vitality; based on the fermentation of lactobacilli with specific amino acids (glycine, arginine and methionine).

A MICRORESERVOIR containing peptides and minerals synergized with vitamin B3 which insures slow diffusion through the body to increase both oxygen consumption (by 110 %) and cell proliferation (by 46 %).

A MARINE OLIGOSACCHARIDE which prevents and reverses the adverse effects of aging, considered as a stimulator of youthfulness, with soothing and desensitizing activity.

A TRIPEPTIDE (palmitoyl-glycine-histidine-lysine) which induces cell growth and stimulates the synthesis of extracellular collagen by dermal fibroblasts.

A combination of UNSATURATED FATTY ACIDS synergized with Shea Butter and vitamin E: a protective complex which combats the effects of stress.

An AMINO ACID COMPLEX which enhance biosynthetic function.

**TIME-DEFYING CREAM for deep down action and efficacy.**

Presented in an elegant glass container (50 ml)

Apply a small amount in the evening over the entire face, focusing specially on the deepest wrinkles. Use a gentle circular motion until all the product is absorbed. The hands too may be treated, if necessary.
